Dear Tony & Tracey

I just wanted to say a big 'Thank-you' for helping assist with my show jumping thoroughbred in getting back to soundness. I highly recommend Tony to anyone that has experienced continuous problems with horses that keep throwing shoes and that have problematic hooves.

Wombat's issues began in early 2008 when a vet check for lameness identified a problem with the shape of his off front. He had always had bad feet and most farriers I had used put that down to being a thoroughbred with naturally poor feet and the injuries he had sustained during his racing days. My vet suspected that Wombat was suffering with a rotated pedal bone- I cant tell you how devastated I was. The x-rays showed his feet were still normal, however, if I didn't get the foot corrected than the likelihood of the foot beginning to rotate was a high possibility and I was recommended to seek a specialist farrier who works with natural balance shoes.

I found Tony over the internet and he is the best thing to ever happen to Wombat. I value Tony's work so much that I travel a good 2 hours from Kinglake West and back just to get Wombat shod. Wombat has been sound now for 2 months and his shoes stay on beyond 7 weeks (where they used to fall off after 3 weeks), his feet are a healthy shape and his movement is the best it has been in 2 years.

Tony is true professional from the way he quietly assesses the horse he is about to perform work on, through to the way he interacts with both horse and owner.

Cheers

Celia

Please see the Picture I attached of one horse walking freely
